

webMethods Advanced Trading Networks Workshop

Format	Classroom
Length	2 Days
Who should participate?	<ul style="list-style-type: none">▪ Trading Networks Developers
Prerequisites	<ul style="list-style-type: none">▪ webMethods Integration Workshop
Software versions covered	<ul style="list-style-type: none">▪ webMethods Trading Networks▪ webMethods Integration Server▪ webMethods Developer

In this follow-on to the webMethods Integration Workshop course, participants are introduced to the advanced features of the webMethods Trading Networks. Topics include Trading Partner Agreements (TPAs), inbound file handling, configuring and managing outbound delivery, Trading Networks performance and security.

This course is hands-on. Exercises are designed to prepare students for self-sufficiency, and to reinforce the concepts discussed in the lecture.

At the end of the course, you will have covered:

- Configure and use TN TPAs
- Configure and use TN Gateway Services
- Describe the different TN Outbound techniques
- Create and Register Custom Delivery Methods
- Configure TN for performance and security

Course content:

The content is organized around development tasks. Students perform tasks with Trading Networks through hands-on exercises that provide user involvement.
